Syntax

```
sOpen()
```

Description

sOpen() setups a seial port object 'sObject' for communications via the serial port.

Procedure Codes

```
% Create serial port object with the specified port

sObject = serial('COM3');

% Set baudrate

sObject.BaudRate = 57600;

% Establish the connection

fopen(sObject);

% Enable torque of all motors (broadcast) in the network

torqueOn(sObject,254);
```
